

How can your pharmacy grow its business?

OmniceIl Immunization Solutions

OmniceIl Immunization Solutions enhance your vaccination workflow, allowing your pharmacy to drive sales by targeting eligible patients for immunization interventions such as flu, pneumonia, shingles and more.

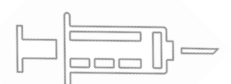

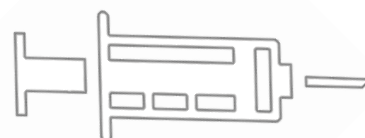

Drive Sales with 500 More Vaccines Per Year

Using the Omnicell Patient Engagement platform, pharmacy can:

- Identify, pinpoint, and prioritize patients that need vaccinations
- Query the state registry (where available)
- Automate reporting to the state registry
- Track and document vaccine administration

Solution Benefits

- Provides a proven ROI
- Maximizes additional pharmacy service opportunities
- Streamlines your workflow using automated tools
- Offers the optional capability to deliver communications to patients about receiving their vaccines at the pharmacy

State Registry Integration

If the state offers the ability to query the state registry, Omnicell is able to capture this information and build targeted patient lists, allowing the pharmacy to maximize its population-level immunization impact.

Bidirectional Data Flow

Omnicell Immunization Solutions allow bidirectional data flow, which in turn empowers pharmacies to harness their own data and actively perform targeted vaccine administrations.

With connectivity to individual state registries, pharmacies can obtain current, individualized vaccination histories in order to make informed decisions regarding patient care.
